Introduction

There comes a time when Humanity has to think about what it is capable of doing in the future. What kinds of goals can we set for ourselves? What can we accomplish that we have not really accomplished yet? What would God want us to accomplish if we could read His mind?

We are at a pivotal point in human history. Our primary goal for the future is to work with all of our brothers and sisters to end the senseless and horrifying violence that has sent God's creation into a depression. We must end this violence peacefully. We must end wrongful deaths by helping those that need psychiatric care and help from us and from God. We need to show these people that Humanity and God can still care about them. They need to understand that we understand that we cannot solve this problem by continuing to launch bombs and missiles at them anymore.

We have a solar system to explore. We have an outdated space exploration program. The cost of energy has bankrupted humanity. Hundreds of millions of people live in poverty. We have to get ready to create the technologies that will allow us to begin to explore our solar system within our lifetime. We must end poverty and suffering throughout the world at the same time.

We can never say never when it comes to building a new spaceship. It is hard to believe that we can leave rocket propelled space capsules as relics in our museums to remind us about how we used to fly to outer space. We must seek God's help so that we can develop a brand new space exploration program for our human family.

We think that our Muslim brothers and sisters would one day want to explore the solar system with us. We have to pray for them during this intense suffering and depression. We should all pray for our Muslim brothers and sisters. We should ask God to do everything that he can to end our suffering and to end the suffering of His Muslims.

We will try to open up a new era in human history soon. We will try to make peace with each other and with God. We will show God how much we love Him by ending the senseless violence that we have been accustomed to in the recent past. We will become victorious over the need to hurt ourselves and over the need to hurt others. That is God's Will. That is our will.

Thank you for reading about my dreams. I hope you will agree with me that these are not one man's dreams. These are everybody's dreams. I hope that you will enjoy reading about our visions about the New Face of Humanity. Thank you for visiting our website.

The Levitation Pods

Levitation Pods would allow us float above the ground for extended periods of Time by using Electromagnetic Propulsion Systems. We can look at the following features of Levitation Pods.

1. Levitation Pods will be mechanisms that would be powered by Clean Energy Generators.
2. Levitation Pods can allow a neutron density, a proton density, or an electron density to stay suspended above the ground of a planet without needing to use any fuel fluids.
3. We can control the surface altitude of the Levitation Pods either by wireless remote control or by a wire that that would connect the levitation pod to a central control unit.
4. A Levitation Pod could make it much easier to lift heavy object off of the ground and to keep them suspended at a constant surface altitude because it would be powered by a clean energy generator.
5. A Levitation Pod could be the main component of a lifeboat for our astronauts if they should ever have to abort a mission in a modern spaceship. Levitation Pods will help their lifeboats to drift at a certain surface altitude without crashing into the ground.
6. It would be much easier to use Levitation Pods to lift extremely heavy neutron densities and/or proton densities and to transport these fields to where we need them to go.
7. Levitation Pods can suspend our newer spaceships in midair their mechanisms would fail to the point where the spaceship might crash.
8. Our spaceships would no longer need heat shields to enter the Earth's atmosphere from outer space. Levitation Pods could help spaceships to make a slow and safe decent into the Earth's atmosphere from outer space.
9. Levitation Pods can leave objects such as satellites suspended above the ground for unlimited lengths of time without having to launch the satellites into an orbit to maintain their surface altitude.
10. Levitation pods could help disaster relief personnel to perform life-saving activities in the event of a natural disaster without having to use helicopters or hydraulic devices.

The Particle Replicator

1. A Particle Replicator would be a Particle Generator that could exactly create duplicates of any types of particles that we could find in our lives.
2. A Proton Particle Replicator could manufacture infinite amounts of water, oxygen, hydrogen, nitrogen, and fuels through electromagnetic interactions.
3. A Neutron Particle Replicator might take small amounts of particles of matter such as wood or plastic and could produce very large amounts of neutron particles that would have the exact chemical structure as the previous Neutron Particles.
4. An Electron Particle Replicator would help us to duplicate many types of particles of energy such as electrical particles, heat particles, or light particles. A sample of electron particles could be converted into very huge amounts of energy particles of light or heat.
5. Particle Replicators would be an excellent way to produce oxygen and water for our astronauts in future spaceships. Generators could produce particles of oxygen, nitrogen, and water so that the spaceships would not have to carry huge storage tanks with those types of fluid particles.

The Internal Gravitation System

An Internal Gravitation System would make it easier for our astronauts to be able to function in a spaceship for long periods of time. The gravitational field of the spaceship's fuselage would feel identical to the Earth's gravitational field. There are many benefits to building spaceships that would no longer produce weightlessness.

1. It would be much easier to maintain hygiene routines in a spaceship with a gravitational field that appears to be similar to the Earth's gravitational Field.
2. It would be easier to regulate bowel movements and urinations in a much more sanitary environment.
3. An internal gravitational system would give our astronauts the ability to engage in regular exercise routines during long space flights.
4. It would be easier for our astronauts to sleep in a spaceship that would have a gravitational field that would be similar to that of the Earth.
5. It would be easier to produce food for our astronauts in an internal gravitation system that would be edible and kind to their digestive systems.
6. It would be easier to maintain life-support systems by better cleansing the atmosphere of the spaceship with an internal gravitational field.
7. It would be easier for our astronauts to generate the energy to communicate with us during a long space flight.
8. The bodies of our astronauts would not deteriorate because of a prolonged existence in a Zero-Gravity Environment.
9. An Internal Gravitation System would make living conditions more manageable so that there will be a decreased risk of the development of psychiatric disorders during space flights.
10. An Internal Gravitation System would give the spaceship's flight surgeon more of an advantage to treat an astronaut that has become ill during a space flight.

The Time Dilation System

It is very hard for any of us civilians to understand time when we travel on a plane from New York to Paris. Our astronauts might become completely ill if they have no sense of what time is like on Earth in a spaceship that is on an extended journey.

1. A Time Dilation System would cause the pulsations of the spaceship's Proton Generators, Neutron Generators, and Electron Generators to exactly imitate the Pulsations of the Earth's gravitational field.
2. One Minute in a spaceship can equal to 4 hours on Earth during a dangerous Time Dilation Episode.
3. 5 hours in a Spaceship can equal 15 minutes on Earth during a Time Dilation Episode that warps time inside of a spaceship.
4. Our engineers must compensate for the fact that time disintegrates and disappears when a spaceship leaves the gravitational field of a planet.
5. We must build computers that calculate the time in a spaceship as opposed to the time on our mother Planet Earth.

The Fluid Compressors and Decompressors

Every spaceship will need to carry a certain amount of fluids in fluid tanks. The fluid particles, or Proton Particles, will be compressed at a very high density inside of the compression tanks.

1. Fluid Compression Tanks would contain up to ten times the proton particles as a normal proton particle storage tank.
2. Fluid Compression Tanks can tolerate the existence of all fluids and gasses.
3. A Decompressor will work with the Fluid Compressor Tank to release gases and fluids that are of need to astronauts in a spaceship.
4. Compressors will take fluids that are produced by Particle Regulators and will store them in Fluid Compression Tanks.
5. Computers closely monitor the transfer of particles to and from particle replicators and fluid compressors.
6. Astronauts must be highly trained in how to avoid an explosion with compressed fluids of oxygen and water.
7. Computers and a Life Support Specialist will make sure that the atmosphere of the spaceship is breathable and has the capability to maintain human life.
8. Fluid Decompressors are a situation where you can store large amounts of fluids in a very small amount of space which maximized the space that astronauts can use in a spaceship.

The Clean Energy Generator

Producing Clean Energy would have very lucrative benefits both here on our planet and in outer space. A Clean Energy Generator would be a stand-alone source of power that would do one thing by itself. It would produce power. Its mechanism would produce power without needing any fuels or other mechanisms for its operations.

1. The Clean Energy Generator would continue to produce power through a mechanism of perpetual motion.
2. The Clean Energy Generator would exactly replicate the power that we use in electrical sockets and for electrical circuits on our planet.
3. The Clean Energy Generator can also allow us to experiment with circuits that vary away from 120 Volts and 60 Amps. We can design circuits for here at home or in outer space that have different specifications for power usage.
4. Clean Energy Generators could collapse the cost of energy for all consumers from around the world. A Clean Energy Generator would be a major stimulus for the world's economy.
5. Clean Energy Generators that would be the power source of spaceships would collapse the cost of space travel. We could build safer and more efficient spaceships that would be powered by clean energy generators.
6. Clean Energy Generators can give us the ability to build relatively inexpensive spaceships that would be faster and more reliable than any spaceship that we have ever built.
7. Clean Energy Generators could also help us to close down all of our nuclear power plants. It is time to invest in safer energy production than we have with nuclear power generation.
8. Clean Energy Generators could help us in the event of a catastrophe. They can help us to have an emergency source of power if we lose power for any reasons.

The Fluid Generators

Clean Energy Generators can produce power. We can also design generators that can produce fluids. Our planet generates huge amounts of water. Could we generate water, oxygen, and nitrogen in a spaceship?

1. Fluid Generators would use special types of magnets in a special mechanism to produce a certain type of fluid.
2. Fluid Generators could produce a fluid with foreign ingredients or without foreign ingredients.
3. Fluid Generators could produce an exactly identical fluid to that with a set molecular structure.
4. Fluid Generators could be manufactured in many different sizes in order to accommodate a home, a factory, or a spaceship.
5. We could rely on the purity of the fluids that we would create with a fluid generator.
6. It would be a huge advantage for our space exploration program if our spaceships could have fluid generators inside of them that could produce certain fluids and gases.
7. Fluid generators would reduce the need to carry huge tanks of fluids to and from outer space. We could create distinct fluids when we would need to create them.
8. We can hope that our spaceships will have a backup system that would provide oxygen, nitrogen, and water to our astronauts if a disaster knocks out their supplies of the fluids.

The Electromagnetic Propulsion System

Rocket propulsion is expensive, cumbersome, and unreliable. We need to find new ways to give our spaceships a more humane way of carrying life into outer space. Let us explore the benefits of building a spaceship with an Electromagnetic Propulsion System.

1. Clean Energy Generators would give power to the electromagnetic propulsion system circuits that would allow a spaceship to rapidly increase and/or decrease in surface altitude.
2. Clean Energy Generators would give the electromagnetic propulsion system the ability to fly either in a western motion or in an eastern motion at inconceivable velocities.
3. An Electromagnetic Propulsion System could launch a small spaceship into the upper atmosphere and into outer space without rockets of other types of fuel-driven engines.
4. An Electromagnetic Propulsion System would work with Levitation Pods. A Spaceship could stay suspended at a given surface altitude indefinitely after the electromagnetic propulsions have gotten the spaceship to that point.
5. An Electromagnetic Propulsion System could propel a spaceship to unimaginable velocities both within a planet's atmosphere, in a planet's orbit, and outside of a planet's orbit.
6. Electromagnetic Propulsion System would have a braking mechanism that would cause it to stop to a velocity of 0 miles per second if the spaceship's computers would detect a collision emergency.
7. It would be easier for our military pilots and for our astronauts to maneuver a spaceship with this kind of propulsion.
8. Spaceships with this type of propulsion would promote healthy hygiene, safe space exploration activities, a higher standard of living for all of us, and would promote a wide range of reforms so that our brothers and sisters would be better able to meet each other across long distances.

The Space Saucercraft

There comes a time in human history when we have to come to a realization that rocket-propelled capsules do nothing for us as far as space travel is concerned. We have to believe that we can build something that is better than a rocket-propelled capsule. We can only build such a superior spaceship if we believe that we deserve something that is better than rockets. Let us look at what we are talking about.

1. The Space Saucercraft would be the fastest international spaceship vehicle to ever be built. It would be able to travel from one point on Earth to another Point on Earth in a matter of minutes.
2. The Space Saucercraft would be powered by three clean energy generators. These generators would give the Space Saucercraft the power travel to any point on the planet and to launch itself into outer space.
3. The Space Saucercraft could hover over any point on the surface of Earth and could stay at a constant altitude for any amount of time.
4. The power supply of the Space Saucercraft would be ten times as powerful as even the most powerful jet engines or rocket engines of the past.
5. It would have unprecedented velocities under water in our planet's oceans.
6. It will have a user-friendly and computerized navigation system for our pilots. Our pilots will always know where they are because the computer will always keep track of all of that.
7. Flying in a Space Saucercraft with an Internal Gravitation System has its advantages. The pilots and crew of the spaceship would not be affected by G-Forces as it would accelerate to speeds that could threaten the lives of our pilots and astronauts in conventional jet aircrafts and spaceships.
8. Modern Navigation Computers will help pilots and astronauts to program the spaceship to travel to where they need to travel. They could change, alter, and enter a new flight plan at any time. The Space Saucercraft will take them where they need to go with no problems.
9. Space Saucercraft vehicles can have a smooth vertical landing on a military base or a space exploration base. They would no longer have to be retrieved from a capsule in an ocean.
10. We have to ensure that our astronauts will be physically and emotionally healthy when they come home from a mission that involves the Space Saucercraft technologies.

The Ultrasonic Sky Cruiser

This will be the passenger and non-astronaut version of the Space Saucercraft.

1. This vehicle will be powered by Clean Energy Generators.
2. It will have all of the capabilities of the Space Saucercraft.
3. It would be much less expensive and much more convenient for passenger to fly to their destinations on Ultrasonic Sky Cruiser Aircraft.
4. This type of engineering project can one day make it possible for non-astronauts and non-pilots to travel into outer space and possibly to other parts of our solar system.
5. We can invest in increasing the standard of living of all human beings by developing this type of transportation vehicle.
6. We can promote the unification of humanity by investing in this engineering project.

The Electromagnetic Cars

When we think of electromagnetic cars we think of a battery that losses power so quickly that it will probably leave us stranded on a highway about five miles from our destination. There may be a better solution. A car may have an Electromagnetic Power Mechanism that will significantly decrease the cost of driving in a car.

1. The fuel mechanism would charge two to three batteries either simultaneously or one after the other.
2. The car's fuel mechanism will work to power motors to recharge batteries in cycles whenever they need to be recharged.
3. The driver might have three to four times as much miles per gallon as he or she might have now.
4. It is a new idea to mix electromagnetic power with a liquid fuel driven car or van. The goal is to raise everyone's disposable income in order to increase our standard of living.
5. A Power Computer would monitor the way that they batteries will either be charging or would be used to power the vehicle to have a velocity on the street.
6. There would be no need for this vehicle to be recharged by an external power supply if this mechanism succeeds.
7. This mechanism can also be used to charge cell phones and other electrical devices.
8. The car would have enough power to become a Wi-Fi Hot Spot so that its occupants can surf the internet.

The Flight Navigation Computer System

A pilot or an astronaut has to understand where he or she is in order to complete the mission to fly from one location to a destination. We really do need airplanes or space vehicles that are much faster than what we have right now. However, our astronauts and pilots get more confused about where they are at any given point the faster that we fly. We need to invest in the development of a powerful Navigation Computer System that would help pilots and astronauts to understand where they are if they are traveling at six-times the speed of sound.

1. The Flight Navigation Computer System must coincide with GPS Technologies that are already in place.
2. Physicists, mathematicians, and computer engineers must work with engineers that will be building our dream spaceship, the Space Saucercraft, so that we can develop a Computerized Navigation System that can work.
3. Our pilots and astronauts cannot get lost when they are traveling at three or four times the speed of sound. They have to be able to guarantee their safety and the safety of others when they are traveling at those velocities.
4. Astronauts should be reliable pilots that can understand the complexities of navigation in a complex gravitational field such as the Earth's Gravitational Field before would consider flying at Mach-4 or at Mach-5.
5. Our pilots and astronauts needs for physicists to develop a reliable Unified Field Theory about Gravitation and Electromagnetism so that they can understand what they are doing when they will be training to fly at unbearable velocities.

The Atmospheric Regulation System

Pilots and astronauts that fly in jet airplanes or in spaceships have to rely on their spaceships to do one thing more than anything else. Their spaceship has to keep them alive until they can return from their destination. They have to have enough breathable oxygen, enough water, enough nitrogen, and enough power so that they can return to home safely. How Would the Atmospheric Regulation System work to achieve these goals?

1. Our scientists have to conduct more in-depth research about how our own atmosphere functions and how it keeps all of us alive.
2. Our engineers have to work with pulmonologists and cardiologists to design a life support system that is adequate for our pilots and astronauts.
3. Our specialists have to make sure that our spaceships and our super-sonic aircraft can support and maintain human life.
4. An astronaut needs to understand that he or she will be put on life support from the start of his or her mission to the end of his or her mission. He or she must be ready to deal with the anxiety and the stress of what they might confront out there in the middle of nowhere.
5. Specialists have to be involved in the way that our engineers will design the life support systems for our future spaceships. They have to help us to make sure that space travel will be right for our pilots and astronauts.
6. Can our pilots and astronauts survive a malfunction or an emergency? We need to design emergency backup systems that we may need to use if something goes wrong with a spaceship that is traveling on a mission.
7. We need a flight surgeon to travel with our astronauts on their missions when we find a way to build a Space Saucer. That helps to protect the lives and the wellbeing of our astronauts and pilots.
8. We need reliable quality control to make sure that our life support on our spaceship will continue to work so that our astronauts can return safely from their voyage.

The Multi-Warp Communication Systems

We will need to communicate with our pilots and astronauts if they go out on missions to the moon and beyond the moon. What will happen if it will take 30 minutes to get a signal transmission from them and it takes them 30 minutes to get a signal transmission from us? We have to develop communication system that will send and receive communications between us and our astronauts at many times the speed of light.

It is probably possible to accomplish this dream. Our Engineers can determine the best way to accelerate the velocity of the transmissions to and from our astronauts in the middle of nowhere. Our scientists are prepared to deal with this problem and to solve it.

We can give you advice about this. Look to a higher power for guidance in your efforts to understand how to create this kind of communications system. We must pray to God that he will allow us to explore our solar system within our lifetime. We should be willing to accept guidance from God and from the Holy Spirit in order to achieve all of this.

Fountain of Youth Project

We must sponsor scientific studies to understand what aging really is and how to manage it. We may or may not want to become old. Our scientists may be able to create anti-aging mechanisms in the future. We should discuss what they may try to do.

1. We must understand what aging is and what causes it.
2. We must understand the role that our diet will play in our aging.
3. We must understand what effect our regular exercise can have on aging.
4. Does obesity accelerate the aging process?
5. Does smoking accelerate the aging process?
6. Does alcohol abuse accelerate the aging process?
7. Does abusing illegal drugs accelerate the aging process?
8. Do a daily intake of vitamins, minerals, and other supplements help us to stay looking young?
9. Would we support scientific research to develop drugs that would slow or stop the aging process in adults?
10. What are the benefits of staying young as opposed to growing old?

The STD Cessation Project

We have to work with God to help our sons, daughters, brother, sisters, and friends to stop becoming infected with sexually transmitted diseases. We have to help our loved ones and our friends about the limits of God's patience when it comes to engaging in high-risk sexual behaviors. We cannot continue to ignore this problem. We cannot continue to allow this problem to get worse.

1. We must teach all young adults in our grammar schools, in our middle schools, and in our high schools to understand the true purpose of sexual activity, which is to work with God to conceive a new human life.
2. We must help our young adults to understand the dangers of engaging in promiscuous and reckless sexual conduct with other partners of the same gender or of the opposite gender.
3. We must help our young adults to understand what a sexually transmitted disease can do to ruin and to destroy their lives.
4. We must help our young adults to understand how to make the correct decision for them when they have to consider what their sexual orientation will be.
5. We need to teach our young adults to find ways to investigate whether a new partner is at a high-risk for being infected with sexually transmitted diseases.
6. Our family planning educators have to show our virginal students that are taking family planning courses pictures of the soars, the scars, and the blisters that torture people with sexually transmitted diseases every day.
7. Our young adults have to be especially concerned with HIV. We must teach them how they get HIV. We must teach them how they can avoid getting HIV by being smart and by being responsible with their sexuality and with their sexual behaviors.
8. Family planning counselors should help our young adults to understand the joy of constructive intimacy. They should see images of the conception of life, the development of life inside God's Factory of Human Life inside of a woman, and a childbirth which are all the consequences of safe and constructive sexual activity.

The Universal Behavioral Disorders Treatment Project

We all in our lives encounter a period when we are so traumatized that we become the victims of a psychiatric disorder. That means that our thinking promotes behaviors that encourage us to hurt ourselves and/or to hurt others. No sane adult would want to become so mentally ill that he or she would want to injure himself, herself, and/or others. We face an international crisis where mentally ill individuals think that they have something to gain by hurting themselves and by hurting others at the same time. Let us look at the arguments.

1. We must help our young adults to understand to get psychiatric help when they feel the need to hurt themselves and/or to hurt others.
2. All of our schools should teach our students to reach out for help from God, from the Holy Spirit, from family members, and from psychiatrists when they feel like hurting themselves and/or like hurting others.
3. Our young adults must understand the consequences that follow a strong attempt to hurt oneself and/or to hurt others.
4. Our criminal justice system is not about incarcerating individuals who do not know better. Criminal justice is about helping human beings to understand what they are doing wrong and to help them to stop the behaviors before they destroy themselves.
5. We have to teach our children the difference between right and wrong from the time that they are kids through the time that they become young adults. Our criminal justice system should be about education kids and young adults so they will avoid incarceration.
6. We do not groom our kids and young adults in our schools for a lifetime of homelessness, incarceration, and substance abuse. Our schools have to groom our students to be successful when they face the realities of life.
7. Teaching our kids the difference between right and wrong is just as important as teaching them everything that they are supposed to be learning in their courses in school.
8. Teaching our kids to be responsible as children and young adults in our schools means that they will honor God and Humanity when they reach adulthood.

The Disability Treatment Programs

All of us will become disabled at some point in our lives. It might be an illness that requires a major operation. It might be a death in the family that causes us to become very depressed. It might be an injury that prevents us from working for a few weeks. We need medical treatment when we are disabled.

We have to sponsor studies and research to better understand how to help disabled children, young adults, and adults to function as normal human beings if that is at all possible. We need to understand what causes disabilities. We need to understand the warning signs that a family member may be mentally ill. We must understand when we have no choice but to seek professional help either for ourselves or for a loved one that needs psychiatric treatment or psychological counseling.

We need to develop more extensive and widely successful disability treatment programs that will help disabled Americans to come to function as part of Humanity as best as they will ever be able to function as part of God's family.

The Humanity Unification Project

We are all part of one family. God is our Supreme Being. He loves all of us. He sees us as being His Children. We do not normally understand that we are all one family. We do not realize that Humanity means that everyone on this planet, regardless of what language we speak, are brothers and sisters that answer to God. We have an obligation to God to show love, sympathy, compassion, and affection to all of our brothers and sisters throughout the world regardless of the religion that they belong to.

The Humanity Unification Project should be an effort for all of us to make peace with one another. We must come to understand why so many of us are so gravely ill that they will want to hurt themselves and to hurt others at the same time. God is very sad at this point in human history. How does God help those of us that want to hurt ourselves and that want to hurt others at the same time?

We cannot solve the problem by being paranoid. We cannot think that there will always be an infinite number of persons that will be ready to try to kill us. Humanity is not out to destroy itself. However, these shocking wrongful deaths in recent months and years have completely disrupted Humanity and God's ability to manage His human family.

We need to work with our brothers and sisters both in this country, the United States, and all other countries in order to achieve a common goal. We have to stop the wrongful deaths. We have to reach out to those that think that they can accomplish something constructive by attacking us and by destroying themselves. They have to know that they have a loving and a forgiving God that is crying and feels sorrow over what has happened to Humanity.

We need to work with God to find peace between each other. We need to help each other if our brothers and sisters feel the need to hurt themselves and/or to hurt others. We need to work with God in order to come to a mutual understanding with our brothers and sisters about how much God loves us and that we have to stop hurting him and to stop God from crying.

We have to be ready to work together and to have the intent to help all of us, that includes persons that have shown the intent to want to hurt themselves and to hurt others, so that God's suffering will start to end. We cannot continue to disrupt Humanity by justifying hatred and wrongful deaths that are not approved by God in any way. Any death of any human being must be authorized by God. God no longer tolerates an unauthorized wrongful death. Wrongful deaths must end.

We need to work on helping each other and to come closer together. We need to show God that we love our brothers and sisters all over the world even though some of them are ill. We will eventually unite into One Single Human Nation. We will leave violence behind us because we will no longer feel the need to suffer with it.

We must show compassion and patience for God by being ready to help those of us that are so severely ill that they have expressed a strong intent to hurt us and to hurt our brothers and sisters. This is a cancer that cannot be cured by disgracing God by causing wrongful deaths. This will be solved when Humanity works with God to solve a problem that God knows exists here. We should all pray to God so that violence will end and the recovery and the rebuilding will begin.

Conclusion

We must always pray for a better tomorrow. We must always look to God for a final resolution to our problems. We must always understand how much God cares for us. He is our friend. He is our Father Figure. He is our Supreme Being that will lead us out of the difficult and painful time in human history.

We always have to dream of accomplishing something better than what we have accomplished. We mature when we are part of God's Universe. We grow up when the Holy Spirit guides us. It is alright to be skeptical about making dreams come true if they sound too incredible to come true. That is consistent with human logic.

We hope that you have gained something positive from our presentation. We all hope for the dawn of a new era in human history to begin soon. We hope that all of the members of our entire Human Family will come to peace with each other. We will be united as one family and as one Nation of Humanity when God finally forgives us for what we have done to him.

Thank you for visiting our website. Thank you for reading through our presentation. We all hope that God will bless all of us.
